Abstract (en)  
[origin: EP2775066A1] The assembly tool (1) has a drive train (9), where the drive train has a unit (10) for connecting with a driving tool in a first end area and has a unit (11) for connecting with a spreading element in a detachable manner in a second end area. The second end area is opposite to the first end area. A stop disk (12) is formed to arrange a cover plate arranged between the second end area of the drive train and the stop disk in a recess in an insulating material. The stop disk is pivot-mounted on the drive train. An independent claim is included for a method for surface flush arrangement of a cover plate in a recess in an insulating material.
