Abstract (en)  
The invention relates to the building industry and is intended for facing jambs of windows, doors and other openings in premises and buildings. The jamb facing profile comprises two facing elements 1 connected by one end-face side 2 at an angle corresponding to the angle formed by the walls of the jamb being faced which adjoins the profile through its rear side 3, and each of which includes a flattened section 4 whose rear side 3 adjoins the wall jamb being faced, a lateral section 5 having a flattened a part 6 connected to the lateral face 7 of the flattened section 4, and a part 8 rounded in its cross-section and curved towards the front face 9 of the profile. The construction includes a fastening section 10 for attachment to the room wall adjoining the jamb and located at the rear side 3 of the profile connected by one side with the flattened section 4 and the lateral section 5 at their junction, a gap 12 being provided between the fastening section 10 and the rounded part 8 of the lateral sections 5, said gap being capable of accommodating the attachable facing profile. At the other end-face side 13 and 14 of the flattened 4 and lateral 5 sections, respectively, at least one protruding mounting element capable of connecting other facing profiles is provided.
