Abstract (en)

[origin: EP2775088A1] A lateral retention system for roller screens (1), constituted, for example, by mosquito nets or curtains or blinds, that can be rolled up on a purposely provided roller or tube (T), the system is equipped with fixed or hide-away perimetral guides (4) and comprises, in combination, a roller screen (1) that is provided, along its own free edges, with a plurality of rigid or semi-rigid leaves or laminas (3), which are characterized by being curved so as to project from the plane of lie of the sheet (1) that constitutes said screen and each of which is glued or appropriately fixed along the edge of the sheet (1), wherein each rigid or semi-rigid lamina (3) has a curvature such as to project from the plane of lie of the sheet (1) in the drawn-out configuration, and has a thickness comparable to that of the sheet (1). According to the invention, said curved laminas have an elongated body with longitudinal development and are fixed to the sheet (1) in a single area of its own body.
