Abstract (en)

A wheel balancing device (1), comprising a rotation shaft (3) on which a wheel (5) can be mounted and means (6) for fixing the wheel (5) to the rotation shaft (3) and further comprising: - a plate (11), which is adapted to be fixed rigidly to a tire removing device (13), - a tubular element (15), which is connected to the plate (11) and accommodates rotatably the rotation shaft (3), - sensor means (7, 9), which are fixed to the plate (11), are connected to the tubular element (15) and are adapted to measure the forces that constrain the tubular element (15) when the rotation shaft (3) and the wheel (5) are turning and to provide a measurement of the forces generated by the dynamic imbalance of the wheel (5).
