Abstract (en)

[origin: EP2775372A1] The device (1) has a main pedal (2) moving between a raised position and a supported position corresponding to a position of the pedal close to a floor of a vehicle at mounted state of the device in the vehicle. A controlled transmission system (9) has an active configuration in which the system is coupled with the main pedal, so that the transmission system moves a slave pedal (20) into the supported position in mounted state of the device in the vehicle when the main pedal is moved into the supported position. An activation and de-activation unit activates and deactivates the system. An independent claim is also included for a motor vehicle.
