Abstract (en)

[origin: EP2775485A2] The device (1) has a displaceable anchor assembly (10) connected to an adjusting element (11) in axial direction between a rest position (l) and a parking position. An axially aligned energizable coil unit (50) is provided for influencing magnetic operative connection between the pole core (20) and anchor assembly (10). An actuating element (31) is connected in axial direction between rest position and parking position. A permanent magnet unit (60) is provided for generating magnetic operative connection between the pole cores (20,40) and anchor assemblies (10,30).
