Abstract (en)
[origin: WO2013067986A1] The invention relates to a legwear (01, 31) in the form of trousers (01) or a skirt (31), comprising a lower material portion (06, 36), which faces the body, and a top material portion (05, 35), which overlaps the lower material portion (06, 36). The material portions (05, 06 or 35, 36) can be removably connected to each other by means of closing means (25, 26). The legwear also comprises a lower waistband portion (04, 34), which faces the body and which adjoins the lower material portion (06, 36) at the top, and a top waistband portion (03, 33), which overlaps the lower waistband portion (04, 34) and which adjoins the top material portion (05, 35). The waistband portions (03, 04 or 33, 34) come to rest at the same height (02) when the legwear (01, 31) is used in an ordinary manner. A lower guiding part (12) is arranged on the lower waistband portion (04, 34), and a top guiding part (13) of a sliding guide (11) is arranged on the top waistband portion (03, 33), said guiding parts (12, 13) being slidable relative to each other along a guiding path. This is accompanied by a change of the waistband width of the legwear (01, 31).
