Abstract (en)
[origin: WO2013068172A2] The action of hair treatment compositions comprising at least one quaternary imidazoline derivative having at least two long fat radicals of the formula (I), in which the R1 and R2 radicals are each independently a saturated or unsaturated, linear or branched hydrocarbyl radical having a chain length of 18 to 30 carbon atoms and X- is an anion, at least one amine and/or a cationized amine and at least one ester quat, can be enhanced when they additionally comprise poly(2-methacryloyloxyethyltrimethylammonium chloride) (INCI name: Polyquatonium-37). This further improves combability, shine and elasticity.
