Abstract (en)  
[origin: WO2013068988A1] The invention relates to a line transport device (22) for transporting electric or optical lines (1, 2), such as wires, cables, optical fibres, etc., along a conveying path (24), having a line conveying means (23) which has at least two pressure rollers (20, 21), between which the conveying path (24) runs, characterized in that, for the alternating conveying of two lines (1, 2), the line transport device (22) has at least one guide means (7, 8) which can be moved relative to the conveying path (24) and by way of which one line (1) can be moved into the conveying path (24) between the pressure rollers (20, 21) and by way of which another line (2) can be moved out of the conveying path (24) between the pressure rollers (20, 21).
