Abstract (en)

[origin: WO2013068596A1] The invention relates to milk protein micro and super-micro fibres (MPM) and polymer nano fibres (MPN) produced according to a spinning method, in which at least one protein, which is obtained from milk and which can be thermally plasticized, is plasticized using a plasticizing agent, such as for example, water or glycerol at temperatures between room temperature and 140 °C by means of mechanical stress in a spinning system and is spun using a spinneret to obtain the MPN- and MPM fibres.
