Abstract (en)

[origin: CA2853726A1] The invention relates to a device for lifting condensates, comprising a container (1) in which condensates are collected and a lift pump for discharging the condensates present in said container, said container (1) being covered, on at least one portion of the submerged inner walls thereof with a biocidal surface treatment, and containing at least one wire element (4) made from a bactericidal metal material, having a diameter of between 0.01 mm and 1 mm, and a length chosen in such a way as to provide a contact surface greater than the surface area of said container (1) in contact with said condensates.
