Abstract (en)
[origin: WO2013068990A1] The invention relates to a twisting device (1) for twisting electric or optical lines (2), such as wires, cables, line bundles, optical fibers, etc., comprising a base (5) and a first twisting head (3) which can be rotated relative to the base (5) and which is designed to grip the lines (2) to be twisted at a first end of the lines. The invention is characterized in that the twisting device (1) has a second twisting head (4) which can be rotated relative to the base (5), which is arranged opposite the first twisting head (3), and which is designed to grip the lines (2) to be twisted at a second end of the lines, said second end lying opposite the first end. The second twisting head (4) can be rotated in the opposite direction of the first twisting head (3). The invention also relates to a method for twisting lines.
