Abstract (en)

[origin: WO2013068169A2] The invention relates to a carrier for an electrical circuit with an integrated energy store, wherein the carrier (10) has at least one cavity (18, 47) having an inner face (20, 56), wherein the cavity (18, 47) is bounded at least partially by a substrate layer (12, 14, 46, 48, 50) of the carrier (10), at least one ion-conducting material (42, 42', 58), which is arranged in at least one of the cavities (18, 47) adjacent to the inner face (20, 56), at least one first electrode (22, 52), which makes contact with at least one of the ion-conducting materials (42, 42', 58) and is electrically conductively connected to at least a first part (31) of the electrical circuit (15) of the carrier (10), and at least a second electrode (24, 54), which makes contact with at least one of the ion-conducting materials (42, 42', 58) and is electrically conductively connected to at least a second part (33) of the electrical circuit (15) of the carrier (10).
