Abstract (en)  
[origin: EP2777429A1] The present invention is a cosmetics container having a sealed structure. In the cosmetics container having a sealed structure according to the present invention, an airtight state can be maintained inside the container by means of a simple structure, by using a configuration wherein the airtight state inside the container can be maintained by causing a sealing member to compress and spread out and to thereby attach hermetically to the inside of the body of the container and seal of the upper part of the body of the container as a result of downwards movement of a cap when one side of a lever member provided on the cap is pressed, and wherein the cap can be separated from the container by releasing the sealing member from the compression as a result of upwards movement of the cap when the other side of the lever member is pressed.
