Abstract (en)

[origin: EP2777432A1] The guide has a guide rail (3), and another guide rail arranged opposite to the former rail. A stop damper (25) is arranged at the latter rail for damping braking action of the latter rail, and a mating stop element (24) is arranged at the former rail. The damper is designed as a lever that is pivotably supporting around a pivot axis (26), where the lever comprises two lever arms (27, 28). An overload-stop device takes effect at a limit value for pivoting action of one of the lever arms and limits the pivoting action of the lever arm about the pivot axis.
