Abstract (en)

[origin: EP2777885A1] The device (10) has a weight (15), which is moved from the drill bit (20) in the direction of a stop, and a drive unit, by which the weight is accelerated within an elongated hollow body (11) from a position located near the drill bit in the direction of the stop. The elongated hollow body is formed in a tubular manner. A compression spring (14) is arranged between the weight and the drill bit-sided end portion of the hollow body.
