Abstract (en)

[origin: EP2778009A1] The vehicle has an access device comprising a platform (18) extending between side faces of a body and placed opposite to an opening of the body. The platform is moved vertically relative to a floor between high and low positions in which the platform is aligned and misaligned with the floor. A mobile passage between the floor and the platform includes steps (24, 25) moving between an intermediate position ranging between the positions, so that each step is aligned with the floor and the platform in the high position.
