Abstract (en)
The invention concerns a reinforcement part configured for being arranged on the outside (21) or the inside (23) of a door (11) in level with a lock case (12) arranged in the door. The reinforcement part comprises a first surface (19), which is configured for in a mounted state abutting, directly, or indirectly via one or more further elements, against the outside (21) or the inside (23) of the door. The reinforcement part comprises a first portion (25) which, in a mounted state, extends into the door (11). The first portion (25) comprises a first vertical abutment surface (27) configured such that it, in a mounted state, abuts directly, or via one or more further elements, against a vertical surface (29) of the lock case (12), or such that the first vertical abutment surface (27) is positioned at a distance which is less than 2.0 mm from the vertical surface (29) of the lock case. The invention also concerns a door (11).
