Abstract (en)

The invention relates to a liquid motion lamp holder combined lighting, comprising: a holder (10) having a base (11), a first mounted seat (12), a second mounted seat (13), a support bracket (14), and a transparent bottle (40) having at least two immiscible substances therein and arranged between the first mounted seat (12) and second mounted seat (13). Whereby the transparent bottle (40) turns into liquid motion lamp visual effect through a projected light of an LED bulb (32) at a bottom of the first containing room (121) and required lighting is available through the lighting bulb (52). Due to the design of the containing height (h) of the second containing room (131), an end of the transparent bottle (40) can be moved in the containing height (h) along the vertical axis (A-A) of the base up and down for the transparent bottle (40) to be easily installed and removed between the first mounted seat (12) and second mounted seat (13).
