Abstract (en)

Anti-intrusion security system (100) comprising fog-generating devices (2, 3, 4) which impairs the sight of the intruder when activated. The devices for generating the fog comprise a heat exchanger (3) for heating and vaporising the fluid with a resistor (34) embedded on a body (31). The generated vapour is released by a nozzle. To make the device more lightweight and immune to vibrations, the body (31) of the heat exchanger is made of ceramic.
