Abstract (en)

The antenna has a coaxial cable (2), and a radiating end element (3) comprising a multi-stranded element. The multi-stranded element comprises a support element at periphery of which the radiating end element is arranged. Radiating conductors are regularly arranged around the periphery of the support element. An intermediate connection electrode (4) is placed between the coaxial cable and the radiating end element. A terminal electrode (5) is placed at the end of the radiating end element.

Abstract (fr)

Cette antenne filaire pour une émission HF par un engin sous marin, du type comportant un câble coaxial (2) et un élément d'extrémité rayonnant (3), est caractérisée en ce que l'élément rayonnant comporte un organe multibrins (3).
