Abstract (en)

A method of converting an application of a mobile device into a distraction-free mode is provided. The method comprises: recognizing a control element within the APP based on the image of the APP on the mobile device and a position of the control element; recognizing a content information of the control element via character recognition unit; generating a layout description including the control element, the position and the content information of the control element by a control handler and transmitting the layout description to a graphical user interface (GUI) engine; and rebuilding an user interface of the APP into the distraction-free mode via the GUI engine.
