Abstract (en)

[origin: WO2013071325A1] The invention relates to a machine tool (1) having a multiplicity of stationary tool spindles (3) that are optionally displaceable from a retracted rest position into an extended working position and are positioned at various positions in a frame-like stand (2) which defines and comprises a machining space, and having a workpiece manipulator (4) by way of which a workpiece support (5) is movable multi-axially in translation and preferably also in rotation. In order to create advantageous loading conditions, it is proposed that a loading door (8) is associated with at least one of the leg walls (7) defining the machining space (6), and that a workpiece support holder (10), which is equipped with a coupling (11) for the workpiece support (5), is arranged on at least one, preferably on both, loading door leaf fronts (9).
