Abstract (en)
[origin: EP2592018A1] The package has a container (1) comprising a wall (2), another wall (3) lying opposite to the former wall and a closure (4) i.e. snap connection, where the closure divides the container into chambers (5, 6) in a leakproof manner. The closure has a locking piece (7) i.e. retaining element, that is arranged on the former wall. A closure counter part (8) i.e. plug-in element, is arranged on the latter wall, where a part of a spattle (9) forms the locking piece or the counter part. The locking piece has a semicircular cross-section, where an end area of the spattle forms a spring of the closure. An independent claim is also included for a method for application of compositions under usage of a package.
