Abstract (en)

[origin: WO2013072524A1] The invention relates to a control system for distributed organizational structures comprising one or more organizations with one or more organizational units. Users are assigned to at least one organization, and roles are assigned to the users. The roles determine the available functionalities within the organization assigned to the user. The invention further relates to the use of the control system in order to identify inventories from locally available database systems and remote database systems, preferably umbilical cord blood data.
