Abstract (en)

[origin: WO2013072890A2] The present invention relates to a rotor of a rotary electrical machine with flux concentration comprising: - a shaft (2) extending along an axis of rotation of the rotor, - a rotor mass (3) arranged on the shaft, having a central opening (5) mounted on the shaft, and defining housings, and - permanent magnets fitted into the housings, the rotor mass and the magnets being configured in such a way as to make the fitting of the magnets into the rotor mass foolproof.
