Abstract (en)

[origin: EP2781257A1] The canister (3) has a conveyor element attached with a valve element for controlling flow of pumpable medium, where the valve element is designed as a multi-way valve (22). The multi-way valve is controlled such that deducted amount of pumpable media is taken off from canister and/or conveyed back again to the canister. The conveyor element is formed with a pump housing (11), and a pump is arranged in the canister. The multi-way valve is connected with a pump housing that is directly connected with a valve housing of the multi-way valve. Independent claims are also included for the following: (1) a dosing device for dosed dispensing of pumpable media (2) a method for delivery of pumpable media.
