Abstract (en)
Concealed hinge comprising two containing bodies (11, 12) hollow inside, a hinging kinematism (13) disposed inside the two containing bodies (11, 12), in an articulated manner with respect thereto, and at least one elastic element (16) associated to the hinging kinematism (13) in order to apply to the latter a force tending to maintain, or to return, the two containing bodies (11, 12) in a closed position. A magnetic element (17) is disposed inside at least one of the two containing bodies (11, 12), and acts on at least one of the mobile parts which make up the hinging kinematism (13), in order to contribute to maintain, or return, the two containing bodies (11, 12) in a closed position.
