Abstract (en)

The heat pump has an evaporator (1), a compressor (2), a condenser (3) and an expansion valve (4). A heat source (6) is provided between the evaporator and the compressor, in which no environmental heat source is arranged. The heat source is arranged in upstream or downstream of the condenser in the heating circuit (10) or a service water line. The heat source has heat exchanger for discharging the heat of electrical or electronic component, preferably regulation or control of power supply of the compressor, an electric heater and/or a circulating pump (7). An independent claim is included for method of operating heat pump.

Abstract (de)

Bei einer Wärmepumpe mit mindestens einem Verdampfer (1), einem Kompressor (2), Kondensator (3) und einem Expansionsventil (4), ist zwischen dem Verdampfer (1) und dem Kompressor (2) und / oder im Heizungskreislauf mindestens eine weitere Wärmequelle (6) angeordnet.
