Abstract (en)
[origin: EP2781864A2] The refrigerator or freezer has a body which includes a refrigerated inner space, and a door which is arranged relative to the body in a pivoting manner, by which the refrigerated inner space is closed in the closing position of the door. A closing unit is formed such that it exercises the closing moment on the door during reaching or falling below a determined door opening angle. A holder (32,36) is arranged on the body. A lever (20) is extended from the holder to the closing unit or to a module.
