Abstract (en)

[origin: EP2781870A1] The plate has a main panel (10) comprising four connection sides and four support sides formed in a rectilinear manner. Joining panels (11a, 11b, 12a, 12b) extend from the connection sides, and connected to joining panels of another plate for forming pipes for circulating fluid, where the junction panels are designed with equal heights. Four support panels (20a-20d) extend from the respective support sides perpendicular to the main panel and connected to respective support panels of the latter plate for holding the plates together in a stack. An independent claim is also included for a heat exchanger.
