Abstract (en)  
[origin: EP2782088A1] Provided is a continuous body of wristbands and a wristband integrally used for mother and child, and capable of preventing unintentional separation of a child wristband from a mother wristband when a wristband 4 is separated or when the mother wristband and the child wristband are attached to mother. The present invention focuses attention on increasing a separation resistance between a mother wristband 7 and a child wristband 8. A band base 2 includes: a band support 3; and the wristband 4 provided within an area inside the band support 3 with an outer borderline 6 disposed between the wristband and the band support, and the wristband 4 includes a mother wristband 7 and a child wristband 8 integrally formed side by side with an inner borderline 9 disposed therebetween, and is configured such that a separation resistance along the inner borderline 9 is greater than a separation resistance along the outer borderline 6.
