Abstract (en)

[origin: WO2013075934A1] The invention relates to a device for comminuting, collecting and transporting of comminuted material, comprising a frame (1) that is designed to be supported by a vehicle, a tool carrier rotor (4) that is accommodated by the frame by means of an axis that is substantially parallel to the treated bottom and perpendicular to the driving direction of the vehicle (2), a drive (5) that moves a shaft (6) which is kinematically connected to the tool carrier rotor (4), and a cover (13) that surrounds the tool carrier rotor (4) on the upper side and that is connected to a feed channel. According to the invention at least one blower (16, 17) is provided in the cover (13) and/or in the channel (14), which blower supports the flow of the material crushed by the tool carrier rotor (4), wherein at least two blowers (16, 17) are provided that are parallel to one another, that rotate in opposite directions, and that have a common chute.
