Abstract (en)
[origin: WO2013076407A1] The invention relates to a hair dryer diffuser comprising a base (1) having a rear opening (2) intended to receive the inlet of an air flow and a front face intended to diffuse an outflow of air. The diffuser also comprises a central portion (14, 15) which extends forward from the base (1) and which has a cross-section that decreases or remains constant as it extends forward from the base, said central portion (14, 15) comprising openings through which part of the air flow can pass. The diffuser comprises fingers (6) that extend forward from the front face of the base (1), such as to come into contact with the hair being dried. The diffuser is characterised in that it is a one-piece diffuser. The invention also relates to a method for producing said diffuser.
