Abstract (en)  
[origin: WO2013076138A1] The invention relates to a transport container for flowable materials, in particular for bitumen in a heated or cold state, the container body (1) of the transport container having a form shaped substantially like a frustum of a pyramid, comprising a bottom (2), side walls (3), and optionally a top surface (4) having a filling opening (5), the bottom, side walls, and top surface being made of flexible material, and the side walls (3) being reinforced against deformation by stabilizing means in the lower region near the bottom, characterized in that the stabilizing means are designed as stabilizer belts (7), which connect the bottom corner regions (8) to the adjacent side edges (9) in a tension-resistant manner and crossed manner, the fastening points (10) of the stabilizer belts on the side edges (9) lying within the lower two thirds of the entire height of the container body, said lower two thirds being near the bottom.
