Abstract (en)

[origin: WO2013075811A2] The invention relates to a security document substrate, which is provided opposite sides with film elements and to an apparatus for producing a security document substrate, wherein the apparatus is configured, in the direction in which the substrate is transported, as follows: a device for providing a substrate, in particular a paper substrate; a first film application device for applying a first film element to a first substrate side; a second film application device for applying a second film element to a second substrate side; the apparatus being characterised in that the first film application device and the second film application device are arranged within the apparatus in such a manner that the first film element and the second film element are applied to the opposing sides of the substrate without the substrate being turned.
