Abstract (en)

[origin: WO2013076411A2] This device (1) comprises: -means for attaching to and suspending from a support member, -a printed circuit (2) comprising (i) an upper face (13), tilted in the direction of the support, (ii) a lower face supporting and linking electronically amongst one another a plurality of electroluminescent diodes, (iii) a first end attached to a first end unit (4), and (iv) a second end attached to a second end unit (5), and -means for supporting and for free passage of at least one electric cord, connected to the first end unit (4) and to the second end unit (5) and intended for guiding each electric cable along the printed circuit (2) between the first end unit (4) and the second end unit (5), the means for supporting and for free passage of each electric cord extending along the printed circuit (2).
