Abstract (en)  
[origin: WO2013075257A2] The solar installation has at least one supporting framework (1) and a plurality of solar modules (S) fastened thereto. The supporting framework (1) has a tubular basic body (2) which can be rotated about the longitudinal axis (L) so that the modules can track the sun. The tubular basic body (2) extends over the entire length of the supporting framework (1). In order to be able to connect the tubular basic body (2) to a further supporting framework (1a, 1b) or to provide it with a bearing point, the tubular basic body (2) is provided on both sides with a respective flange (10, 11).
