Abstract (en)

[origin: EP2783599A1] The carrier (2) has a fastening region (4) that is provided for releasably fastening the carrier to a dedicated wall bracket of rack system. A shelf is extended in vertical direction in carrier extending abutment portion (12). A coupling unit of shelf is struck upon displacement in two transverse directions of carrier. A clamping element (19) is spaced from the abutment portion arranged opposite in transverse direction of carrier. The coupling unit is arranged between the abutment portion and the clamping element, so that the clamping element is pressed against the abutment portion. An independent claim is included for a rack system attached to wall.
