Abstract (en)

[origin: EP2784221A1] The suspension device (1) comprises a mounting element for mounting the suspension device on a barrier section (2) of the control system, and a chassis (16) for moving the barrier section on a substantially horizontally extending running plane (3). The chassis has a driving element, which folds the driving element parallel to the running plane during extension of the chassis from the rest position into the driving position.
