Abstract (en)  
The invention relates to a building system for a building, comprising a plurality of panel-like building elements (20) having a front and back side, the back side of the building elements being provided with at least one cavity (23), and a plurality of clips (26) adapted to be attached to the building and formed to snap into the cavity of the building elements. The building elements have opposite first and second edges, the first edge being strip-shaped and extending at the back side of the building element, the second edge has at the back side of the building element a recess adapted to receive the strip-shaped first edge of an adjacent building element.
