Abstract (en)

[origin: EP2784263A1] The roller blind device (12) has a roller blind shaft (121) which is rotated along the roller shaft axis. A driving device (2) is provided with an output shaft and configured to adjust roller blind shaft by an electric motor. The transmission stage is provided to operatively connect the output shaft with the roller blind shaft. The transmission stage is comprised with the first gear which is rotatably mounted about on roller blind shaft parallel to the first rotational axis spaced from the roller blind shaft axis. An independent claim is included for the closing device of building.
