Abstract (en)

[origin: EP2784264A1] The device has arc-shaped guides (1) mounted on a circular arc magazine (6). A protective grill (3) on carriage elements is movable along the guide. A drive i.e. hydraulic motor (4), is arranged and movable along the guide through the protective grill. The guides are arranged parallel to each other and connected through two transverse struts. The guides are fastened at the circular arc magazine, and a sensor is arranged for determination of a position of the grill that is connected with a machine controller.
