Abstract (en)

[origin: EP2784409A1] A portable fuel heater (1, 101, 201, 301) to heat air, comprising: a combustion chamber (10, 110, 210, 310) defined by a first delimitation wall (11, 111, 211, 311); fuel adduction ducts (12) leading to the inside of the combustion chamber (10, 110, 210, 310); first forced ventilation means (13) configured to generate an oxidizing air flow (14) in the combustion chamber (10), where it reacts with the fuel; an energy converter (20, 50) arranged with a first thermal exchange portion (21, 51) in thermal contact with the combustion chamber (10, 110, 210, 310) and a second thermal exchange portion (22, 52) that is distinct from said first exchange portion, configured to convert the thermal energy of the temperature difference between the first thermal exchange portion (21, 51) and the second thermal exchange portion (22, 52) into electric or kinetic energy, said energy converter (20, 50) being connected to actuate said first forced ventilation means (13).
