Abstract (en)
Heat exchanger between a first fluid and a second fluid, said heat exchanger comprising a first core (1) defining flow passages for said first fluid and said second fluid stacked alternatively along a stacking direction to have both fluids exchanging heat there between, said heat exchanger further comprising a receiver (7) for said first fluid, said receiver comprising a body (9) defining one tube receiving said first fluid, said tube having two open longitudinal extremities (11), said receiver further comprising caps (12) closing an internal volume (10) defined by said tube for said first fluid, said body (9) being attached to a side of said first core (1) oriented perpendicularly to said stacking direction.
