Abstract (en)

[origin: EP2784476A1] The storage device has an opening (303) that comprises an upper region and a lower region, where the opening is designed to accommodate a sample body (200). The sample body has an upper part and a central part adjoining the upper part. The walls of the opening are designed such that, when the sample body is accommodated, the central part is located at a distance from the walls of the opening. A lateral guide (307) is provided by the walls of the upper region.
