Abstract (en)
[origin: EP2784607A1] The watch (1) is provided with crystal (4) in middle portion (2) to delimit a watch case (6). The crystal is set with a top surface (8) facing the user and an opposite bottom surface (10) facing the watch case. An electronic device is arranged on bottom surface of the crystal. A printed circuit board (18) is located inside the watch case, and remote from electronic device. A flange (26) is located between crystal and printed circuit board. A unit is set for ensuring the electrical connection between electronic device and printed circuit board.
