Abstract (en)

[origin: EP2784761A2] The cabinet (1) has a rear wall (6) including a dividable part (8) with a hole (22) for passage of a fastening screw. The dividable part includes a dividable portion (11), which is projected towards outside relative to an outer side (7) of the rear wall. An end of an operating rod (15) rests against the dividable portion as long as the dividable portion is not separated, and against a receiving surface i.e. wall, through the hole by the dividable portion when the dividable portion is separated. The rod is provided with an electronic removal detection element (21).
