Abstract (en)  
[origin: EP2784789A1] The device has a board (2) having a groove (8) that is suitable for receiving cables. A transport element comprises a nozzle that is arranged to transport the cables and to position the cables in the groove of the board. A control unit is arranged to control the displacement of the cable transport nozzle. A set of flexible and resilient holding elements (6) is arranged to hold the cables in the groove. The holding elements are deformable to allow the nozzle to pass when the nozzle positions the cables in the groove and to revert to its initial form to hold the cables in the groove.
