Abstract (en)

[origin: WO2013079879A1] The invention relates to a spacing device (6) for a device for attaching (4) an object (3) to a wall (1) covered with an insulating layer (2). Said spacing device (6) is characterised in that the device is made of a thermally insulating material and comprises a front surface (60) intended for being oriented facing the wall (1), a rear surface (61) intended for being oriented facing the object (3) to be attached, at least one lateral side (62) intended for being oriented facing the insulating layer (2), at least one axial opening (63) extending from the front surface (60) and at least towards the rear surface (61) and intended for receiving on the inside an attachment member (5) that comprises the attachment device (4). On the inside, the spacing device further comprises at least one channel (64) opening onto the rear surface (61) and at least onto one lateral side (62), said channel (64) being intended for receiving a thermally insulating filling material (9). The invention also relates to an attachment device (4) comprising such a spacing device (6).
